SUBJECT INDEX

to Volume 119, May–August 1988

Aberrations, selective recovery of, *D. melanogaster*, 377
Abortion, spontaneous, HLA-sharing, humans, 199
Act87E, molecular and genetic analysis, 407
Actin, gene region, Drosophila, 407
Adh^{SL}, regulatory mutation, 631
Afr-1, chromosomal location of, 687
Agaricus bitorquis, 35
Alcohol dehydrogenase, yeast, resistant to pyrazole, 791
Allele
  bronze, sequence, maize, 185
  modifiable, genetic interactions, *D. melanogaster*, 391
  neutral, sampling theory, 721
Allozyme, genetic structure, *Rhagoletis pomonella*, 445
Amino acids
  biosynthesis
    multiple new genes, yeast, 13
    crl mutant phenotypes, 317
  catabolism, yeast, 527
Amy region, *D. melanogaster*, variation in the restriction map, 619
Androgen, regulation of β-glucuronidase, mouse, 151
Aneuploid, *r-X1*-containing plants, microsporogenesis, maize, 975
Antirrhinum majus, large-scale chromosomal restructuring, Tam*3*, *nivea* locus, 171
Ascobolus immersus, 329, 337
Assembly domains, protein-protein interaction, bacteriophage λ terminase, 477

Bacteriophage λ, double-stranded repair, *E. coli*, 751
Bacteriophage λ terminase, large subunit, domains for protein-protein interaction, 477
Bacteriophage T4, *regA* gene of, autogenous regulation, 743
Barley, genetic diversity, comparative assessment, 981

Caenorhabditis elegans, 43, 345, 355, 365
Carbohydrates, storage, extracted lines of *D. melanogaster*, 595
Cathepsin D, mutants, deficient, 355
Centromeres, pairing of homologs, meiosis, 273
CHA1, molecular genetics, *S. cerevisiae*, 527
Chorion locus, autosomal, evolution in Drosophila, 663
Chromosome
  compound *X*, spontaneous formation, *Drosophila melanogaster*, 95
  deletions and duplications, *D. melanogaster*, 377
  intercultivaral substitution effects, cold tolerance, wheat, 453
  large-scale restructuring, Tam*3* at *nivea* locus, *Antirrhinum majus*, 171
  meiotic, disjunction, 261, 273
  P element insertions, *singed* locus, *Drosophila melanogaster*, 75
  rearrangement, cell fitness in *E. coli*, 771
  recombining inverted repeats, mouse, 161
  region 67A-d of *D. melanogaster*, genetic analysis, 579
  unstable *P* element insertion, *singed* locus, *Drosophila melanogaster*, 85
Chromosome *15*, α-fetoprotein regulatory gene on, mouse, 687
Chromosome *X*
  duplications, dosage compensation in *C. elegans*, 365
  variance and covariance, correlation between sexes, 421
Chromosome *Y*, evolution, *X-Y* recombination, 711
Colias, adaptation at specific loci, 913
Complementation
  intergenic, *D. melanogaster* 87E, 407
  transitory *cis*, transposition functions, *Salmonella typhimurium*, 9
crl mutant phenotypes, yeast, 317
Cryptic genes, β-glucoside utilization in, 485
Cryptic genotypes, estimation, number of offsprings and, 465
Cycloheximide, lethal mutations resistant to, yeast, 303
Cytogenetics, Karl Sax and, 5
Cytoplasmic inheritance, unidirectional incompatibility, *D. simulans*, 435

Dictyostelium discoideum, 561, 571
Diexpoxybutane, analysis of 67A-D *D. melanogaster*, 579
DIS1, yeast, meiotic mutant, 261
Discoidin I gene family, organization, 571
Disequilibrium
  HLA-sharing, spontaneous abortion, humans, 199
  maternal-fetal interactions, maintenance of HLA polymorphism, humans, 205
DNA
  evolution of bacterial transformation, 213
  hybrid, reciprocal exchanges in *b2* gene, 329, 337
  modification, *Mul* element from maize stocks, 951
  repair functions, 289
  restriction map, variation and divergence, 875
DNA insertions, mapping, pulsed field gel electrophoresis, 227
DNA probes, use in taxonomy, Dictyostelium wild isolates, 561

Dosage compensation
sex determination and, fruitfly, 829
X chromosome duplications, *C. elegans*, 365
Double-strand gap repair, gene conversion, *E. coli*, 751
Drosophila grimshawi, 663
Drosophila melanogaster, 63, 75, 95, 105, 123, 377, 391, 399, 407, 421, 579, 595, 609, 619, 631, 639, 647, 663, 711, 815, 829, 863, 875, 889
Drosophila pseudoobscura, 465
Drosophila simulans, 435, 875, 903
Drosophila subobscura, 663
Drosophila virilis, 663

Embryogenesis, zygotic expression of *Toll* gene, *Drosophila melanogaster*, 123
Endosperm, development, maize, 457
Escherichia coli, 227, 485, 751, 771
Ethyl methanesulfonate, analysis of 67A-D *D. melanogaster*, 579
Evolution, bacterial transformation, sex with dead cells, 213
Evolutionary potential, β-glucosides, *E. coli*, 485

Family profiles, estimation of parental genotypes, 465
α-Fetoprotein, *Afr-1*, chromosomal location, mouse, 687
F insertions, mapping, pulsed field gel electrophoresis, 227

Gene
b2, reciprocal exchanges in, 329, 337
conversion
distance-dependent, 535, 541
double-stranded gap repair, *E. coli*, 751
inverted repeats, mouse, 161
large heterology in *E. coli*, 759
cyc1, differential mismatch repair, yeast, 21
disruption, reversion of, 237
dosage, alteration of taste sensitivity to trehalose, 399
family organization, discoidin, 571
fog-2, hermaphrodite germ-line sex, *Caenorhabditis elegans*, 43
leu4, leucine biosynthesis, yeast, 13
modifier, genetic interactions of, *D.melanogaster*, 391
r-, pleiotropic effects of substitution, 705
ribosomal, genes, linkage disequilibrium, 943
sisterless, as *X/A* elements, 829
structure, antimorphic mutation of *D. melanogaster*, 647
suppressor, coat color and, mouse, 933
Toll, zygotic expression, *Drosophila melanogaster*, 123
Genetic correlation, carbohydrate and lipid storage, extracted lines of *D. melanogaster*, 595
Genetics
anecdotal, historical and critical commentaries, 5, 223, 473, 739
behavior, alteration of taste sensitivity to trehalose, 399
molecular, serine and threonine catabolism, *S. cerevisiae*, 527
quantitative, *X*-linked effects, 421
structure of natural populations, *Rhagoletis pomonella*, 445
Genome, organization, lethal mutations in *C. elegans*, 345
Geographic variation, inheritance and fitness effects, incompatibility in *D. simulans*, 435
Glucose, regulation, oversecretion mutants, yeast, 499
Glucose-6-phosphate dehydrogenase, allozymes of, 913
β-Glucoside, utilization, *E. coli*, 485
β-Glucuronidase, androgen regulation, mouse, 151
Glycolysis, allozyme variation in, 913
G protein, suppression of mutation, sterility and, *S. cerevisiae*, 797
Growth habits, spring, wheat, 453
GTP cyclohydrolase, *Punch*, *D. melanogaster*, 609

Haploinsufficiency, muscle-defective mutations, *Drosophila melanogaster*, 105
Hardy-Weinberg law, pseudo-random mating populations, 731
Heat shock proteins, genetics of 67A-D, *D. melanogaster*, 579
HLA complex
maintenance of polymorphism, maternal-fetal interactions, humans, 205
sharing of antigens, spontaneous abortion, humans, 199
Hobe elements, molecular analysis, *D. melanogaster*, 889
Holliday junctions, reciprocal exchanges in Ascobolus, 329
Hormones, androgen regulation, β-glucuronidation, mouse, 151
Hybrid dysgenesis
evolution of, 815
unstable *P* element insertion, *singed* locus, *Drosophila melanogaster*, 85
Hygromycin B, hypersensitivity, *crl* mutant phenotypes, 317

Immunoglobulin, IgA, evolution, mouse, 925
Inbred lines, maize, *Uq* presence, 457
Inbreeding, HLA-sharing, spontaneous abortion, humans, 199
Incompatibility, unidirectional, *D. simulans*, 435
Inversion
chromosomal, cell fitness in *E. coli*, 771
DNA polymorphism and, *Adh* locus, *Drosophila melanogaster*, 123
intrachromosomal recombination, reciprocal ex-

change, mouse, 161
α-Isopropylmalate, leucine biosynthesis, multiple new genes, yeast, 13
Isozyme polymorphism, barley, genetic diversity in, 981

KP elements, molecular analysis, *D. melanogaster*, 889

Leucine, biosynthesis, multiple new genes, yeast, 13
Leucyl-tRNA synthetase, cytoplasmic, *Neurospora crassa*, 805
Linkage disequilibrium, human ribosomal genes, 943
Lipids, storage, extracted lines of *D. melanogaster*, 595
Locus
  Adh, inversions and DNA polymorphism, *Drosophila melanogaster*, 123
  bronze, sequence, maize, 185
  Enhancer of split, genetic analysis, *Drosophila melanogaster*, 63
  nivea, chromosomal restructuring, *Antirrhinum majus*, 171
  singed
    P element insertions, *Drosophila melanogaster*, 75
    unstable *P* element insertion, *Drosophila melanogaster*, 85
Lymphoblastoid cells, polypeptide constituents of, human, 693
Lysosomes, protease, mutants deficient in, 355

Maize, sequence of *bronze* alleles, 185
Mating
  gpal mutation, sterility and, *S. cerevisiae*, 797
  pseudo-random, Hardy-Weinberg law, 731
Meiosis
  centromere pairing of homologs, 273
  cytogenetics and Karl Sax, 5
Melanoma, genetics of, 679
Microgeographic heterogeneity, natural populations, *Rhagoletis pomonella*, 445
Microsporogenesis, *r-X1* deficiency during, nondisjunction induced by, maize, 975
Mismatch, differential repair, *cyc1* mutations, yeast, 21
Mitochondria, inheritance, nuclear migration, *Agaricus bitorquis*, 35
Molecular microevolution, gene mutants, yeast, 791
Mouse
  androgen regulation, β-glucuronidase expression, 151
  coat color phenotype, three pigment mutations, 933
  α-fetoprotein *Afr-1*, chromosomal location, 687
  IgA heavy chain gene, evolution of, 925
  recombining inverted repeats, 161
M26 recombination hotspot, *S. pombe*, 491
Mul, DNA modification of, non-mutator maize stocks, 951
Multigene evolution, implications for, human ribosomal genes, 943
Multigene families, actin, molecular and genetic analysis, 407
Muscle, haploinsufficiency, *Drosophila melanogaster*, 105
Mutant
  sterile, suppressor of *gpal*, 797
  white unstable, genetics, *D. simulans*, 903
Mutation
  ade6-M26 S. pombe, crossover stimulation by, 507
  antimorphic, *D. melanogaster*, 647
  heterochronic, shoot development and, maize, 959
  human somatic rates, 693
  hyper-recombination, genetic control of, *S. cerevisiae*, 779
  oversecretion phenotype, *S. cerevisiae*, 499
  pigment, coat color phenotype, mouse, 933
  Punch, characterization of two additional classes, 609
  regulatory, Adh^{SL}, 631
  suppressor, unstable *white* in *D. simulans*, 903
  yeast
    crl, 317
    cycloheximide-resistant temperature-sensitive lethal, 303

Neurogenesis, genetic analysis of *Enhancer of split*, *Drosophila melanogaster*, 63
Neurospora crassa, 805
Noncomplementation, unlinked, 249

Oncogene loci, linkage of, Xiphophorus, 679

Parental genotypes, estimation, number of offsprings and, 465
P elements
  hybrid dysgenesis potential following contamination, *D. melanogaster*, 815
  insertions and rearrangements, *singed* locus, *Drosophila melanogaster*, 75
  molecular analysis, *D. melanogaster*, 889
  unstable insertion, *singed* locus, *Drosophila melanogaster*, 85
Pheromones, male-predominant, *D. melanogaster*, 639
Phosphoglucomatase, allozymes of, 913
Physical mapping, DNA insertions, pulsed field gel electrophoresis, 227
Pisum sativum, 705
Plasmid, homologous recombination, *E. coli*, 751
Pleiotropic effects, gene substitution, pea, 705
Point mutation heterozygosities, stimulation of reciprocal changes, gene *b2*, 337
Polymorphism
  inverted and noninverted chromosomes, *Adh* locus, *Drosophila melanogaster*, 123
  maintenance, maternal-fetal interactions, humans, 205
  Mhc class II, *Spalax ehrenbergi*, 141
  t-specific, mice from Israel and Spain, 157

Polypeptide constituents, lymphoblastoid cells, human, 693
Population
  natural, genetic structure, *Rhagoletis pomonella*, 445
  wild and cultivated, genetic diversity, barley, 981
Population genetics
  adaptation at specific loci, 913
  beginnings of, 473
  rosy gene region variation, 875
  sampling theory, selectively neutral alleles, 721
  theoretical, evolution of, 711
Protease, lysosomal, mutants, 355
Pseudo-random mating, populations, Hardy-Weinberg law, 731
Pulsed field gel electrophoresis, physical mapping of DNA insertions, 227
Punch, mutations, characterization of two additional classes, 609
Pyrazole, resistance, yeast alcohol dehydrogenase, 791

RAD3, hyper-recombinational *rem1* mutations, 289
Radiation, cytogenetics and Karl Sax, 5
Reciprocal exchanges, stimulation of, gene *b2*, 337
Recombination
  allelic and ectopic, Ty elements in yeast, 549
  coincident, during mitosis, yeast, 541
  ectopic, *S. pombe ade6-M26*, 507
  frequencies of *cyc1* mutations, mismatch repair, yeast, 21
  homologous, *E. coli*, 751, 759
  intrachromosomal
    genetic control of, *S. cerevisiae*, 779
    reversion of disrupted gene, 237
  inverted repeats, mouse, 161
  meiotic
    gene *b2*, 329, 337
    S. pombe M26, 491
  meiotic disjunction, 273
  mitotic, yeast, 289
  rDNA linkage disequilibrium, 943
Restriction map, *Amy* region, *D. melanogaster*, 619
RFLP, *Mhc* class II polymorphisms, *Spalax ehrenbergi*, 141
Rhagoletis pomonella, 445
RNA
  binding proteins, bacteriophage T4, 743
  chromosomal inversion effects, cell fitness in *E. coli*, 771
  polymerase II, antagonistic interactions, *D. melanogaster*, 863
  polymerase mutants, yeast, 517
  zygotic expression of *Toll* gene, *Drosophila melanogaster*, 123
RPC160, conditional mutants of, *S. cerevisiae*, 517
RpII215 locus, antagonist interaction between allele, *D. melanogaster*, 863
RPLP analysis, nuclear migration, mitochondrial inheritance, *Agaricus bitorquis*, 35
r-X1, deficiency during microsporogenesis, nondisjunction induced by, maize, 975

Saccharomyces cerevisiae, 13, 21, 237, 249, 273, 289, 303, 317, 499, 517, 527, 541, 779, 791, 797
Salmonella typhimurium, 9
Sampling theory, selectively neutral alleles, migration, 721
Sax, Karl, cytogenetics and, 5
Schizosaccharomyces pombe, 491, 507
Scutoid, mutation of *D. melanogaster*, molecular analysis, 647
Segregation distortion, HLA-sharing, spontaneous abortion, humans, 199
Sequence divergence, non-uniform, DNA, 663
Serine, catabolism, molecular genetics of, *S. cerevisiae*, 527
Sex
  evolution of bacterial transformation, 213
  germ-line-specific determination gene, spermatogenesis, *Caenorhabditis elegans*, 43
Sex chromosome, evolution of, 711
Sex determination
  signal, fruitfly, 829
  X chromosome duplications, *C. elegans*, 365
Sexual dimorphism
  evolution, *D. melanogaster*, 421
  male-predominant pheromones
    genetic analysis, 639
Slime mold
  cellular
    discoidin gene family organization, 571
    DNA probes for taxonomic study, 561
Spalax ehrenbergi, *Mhc* class II polymorphisms, 141
Spermatogenesis, *fog-2* sex determination gene, *Caenorhabditis elegans*, 43
Steroids, androgen regulation, β-glucuronidation, mouse, 151

t-complex, specific DNA polymorphisms, mouse, 157
Temperature, lethal mutations resistant to, yeast, 303
Threonine, catabolism, molecular genetics of, *S. cerevisiae*, 527
Tn*5* insertions, mapping, pulsed field gel electrophoresis, 227
Transformation, bacterial, evolution, 213
Translation, depression of, bacteriophage T4, 743
Transposable elements
  activation, endosperm development in maize, 457
  spontaneous formation of compound *X* chromosomes, *Drosophila melanogaster*, 95
  Tam*3* at *nivea* locus, chromosomal restructuring, *Antirrhinum majus*, 171
Transposons
  defective, transitory *cis* complementation, *Salmonella typhimurium*, 9
  unstable *P* element insertion, *singed* locus, *Droso-*

phila melanogaster, 85
Trehalose, taste sensitivity, alterations by gene dosage and, 399
Trisomes, interaction in meiosis, 273
Triticum aestivum, 453
Tubulin genes, new conditional-lethal mutations, isolation, 249
Tu locus, melanoma-determining, Xiphophorus, 679
Two-dimensional polyacrylamide gel electrophoresis, pleiotropic effects of gene substitution, pea, 705
Ty elements, allelic and ectopic recombination, yeast, 549

Ultrabithorax, antagonist interaction between allele, *D. melanogaster*, 863
unc-22(IV) region, *Caenorhabditis elegans*, analysis of lethal mutations, 345
Uq, transposable element, maize, 457

Wheat, winterhardiness and vernalization, intercultivaral chromosome substitution effects, 453
Wright, Sewall, commentary, 1

Xiphophorus maculatus, 679

Yeast
alcohol dehydrogenase resistant to pyrazole, structural gene mutants of, 791
coincident recombination, during mitosis, 541
cyc1 mutations, differential mismatch repair, 21
hyper-recombination mutations, 779
leucine biosynthesis, multiple new genes, 13
meiotic segregation mutant, 261
mitotic gene conversion, behavior of insertions and, 535
mutations, temperature-sensitive lethal, 303
nonsense mutation, suppression of, 317
oversecretion mutants, 499
RNA polymerase mutants in, 517
serine and threonine catabolism, 527
spontaneous mitotic recombination, 289
Ty elements, allelic and ectopic recombination, 549
unlinked noncomplementation, 249

Zea mays, 457, 951, 959, 975
